

1 Block is roughly 3 feet

I used the town map boundry measurments which seem to be greater than the actual measurments by 3'-6'. 125' from my left rear pin (facing house from route 100) is 125' to the edge of the road. My right rear marker stake/pin is 108' measured to the same spot on edge of the road not the 124' on the town map.

The paved driveway is 22' wide and there is enough space on the left side, closest to the house for 2 vehicles to park. On the right side of the garage in front of the container and next to the container you could fit 8-10 if need be. My ideal plan is to do more jobs where i pick up and return vehicles so i am not filling my yard with customer vehicles.

The space between the container and garage will have a panel to cover the visible space from the road to house tires, scrap and other "messy" items to keep them out of view from the road. I plan to paint the container to match the garage as well.

I have mapped out a spot for a sign although im thinking if i do one at all it may just be attached to the garage.

Overall it should pretty much appear and operate the same as it has in the past when it was previously a repair shop.
